Banding and Buckle Installation with Logistick product.
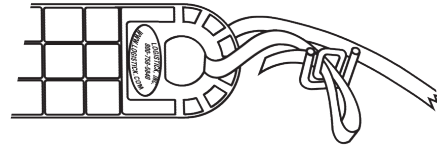

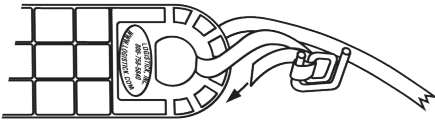

1.
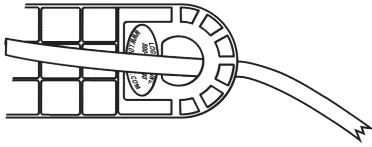

Adhere Logistick strapping product on container/trailer wall per instructions. Feed banding through Logistick product.
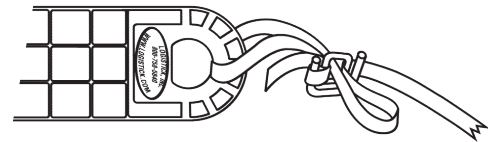

2.

The buckle ends must face outward to properly secure freight. Create a loop with the short end of the banding and feed that loop through the center of the buckle.

**3.**

Hook the loop over the leg of the buckle closest to the banding end.

4.

Create a second loop with the long end and feed through the center of the buckle.

5.

Hook the second loop over the other leg of the buckle. Pull both ends of the strap tight.
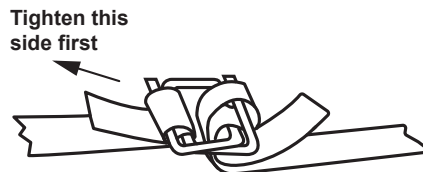

Banding and Buckle Installation for the end of a load.

1. Buckle ends must face outward to properly secure freight

2.

3. Tighten this side first

4. Tighten and use tensioner if needed
